Release 08.01
February 15th, 2000

Release 08.01
February 15th, 2000

1. Introduction

This Provisioning Manual is issued at each major software release for DMS-100 Family switching equipment. This issue relates to the major software release NA013.

The software provisioning information provided in this manual is extracted entirely from Nortel Network's PCA (Product Content Application) database. Because the manual is prepared from extracts of routinely maintained information, its content represents the state of the DMS 100 family software provisioning information at the time of issue. Comprehensive software provisioning information is provided for software delivered in the PCL (Product Computing-module Load), NA013.

Some software functionality is optional. Its selection is controlled by SOC (Software optionality Control). These SOC functions are identified. Some SOCs and some software functions require special hardware provisioning. Where these are encountered, the required hardware is identified. Order codes for orderable software products and SOCs are also provided.

Release 08.01
